INSPECTIONS THAT PROTECT THE VALUE OF YOUR CARGO

TopControl provides independent quantitative and qualitative inspection services to reduce commercial risks and ensure that goods comply with contractual requirements.

PRE-INSPECTION - ensures that only compliant goods are loaded and delivered, preventing disputes and financial losses.

Includes:

- identification of products intended for loading, in accordance with the client's instructions;
- verification of the quality and condition of the goods prior to loading;
- confirmation that the products are not contaminated, deteriorated, or non-compliant.

- ✓ Applicable to grains and oilseeds
- ✓ Trucks, containers, barges, vessels
- ✓ Warehouses and loading points

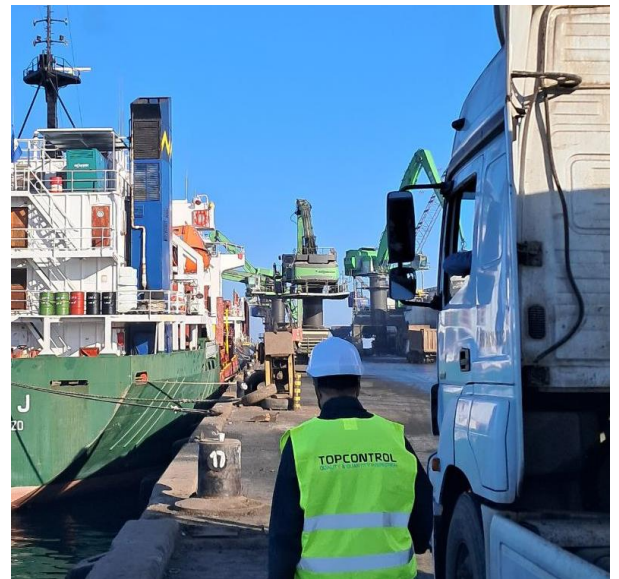

QUANTITATIVE INSPECTION - aims to accurately determine the quantity loaded or received, using the method appropriate to the type of cargo.

Includes:

- physical measurements;
- tare/gross weighing of means of transport;
- Draft Survey method (for barges and seagoing vessels);
- counting of packaged units (bags, boxes, etc.).

- ✓ The method is selected to minimize measurement uncertainty and ensure results acceptable to all parties involved

QUALITATIVE INSPECTION – focuses on assessing the quality level of the goods, based on correct sampling.

Includes:

- sampling in accordance with applicable standards;
- proper handling and sealing;
- dispatch of samples to accredited partner laboratories.

✓ Proper sampling is essential for valid results that are contractually acceptable

INSPECTION DURING LOADING/UNLOADING - performed at the client's request in order to:

- prevent deviations in quantity or quality;
- monitor compliance with requirements agreed by the interested parties;
- document high-risk situations.

✓ Applicable to grains, feed, and oilseeds, using any means of transport

✓ Rules defined by the client and/or applicable standard requirements

FUMIGATION - prevents infestation and maintains the quality of goods during transport or storage

Includes:

- application of treatment in containers or seagoing vessels;
- selection of the appropriate/authorized fumigation method and active substance;
- safety measures for personnel and the environment
- process monitoring;
- issuance of relevant documentation.

✓ Protects the commercial value of the goods

TOPCONTROL
QUALITY & QUANTITY INSPECTION
10 Years of Leadership

FOSFA[®]
INTERNATIONAL
